Reimagine your MIS by bringing the right information to the right people at the right time

Developed with post-primary schools in mind, our Cloud-based solution is the evolution from the traditional on-premise Management Information System (MIS).

The challenge

The focus for all schools is to improve teaching and learning. At Advanced, we understand schools are facing increased barriers to reach this goal. With budget cuts and increased student numbers, schools now have to do more with less.

Teachers are taking on additional administrative tasks, resulting in reduced contact time and a larger workload. Principals are looking for innovative ways to modernise their systems in order to make things easier for their colleagues, whilst maximising a limited budget.

The solution

With our flexible, innovative MIS, ensure the right information is available to the right people, at the right time. With insight from our Cloud solution, schools can concentrate on improving learner outcomes and supporting children to reach their full potential.

Principals and Deputy Principals have access to the correct information, knowledge and understanding of their school to drive improved teaching and learning, whilst optimising their limited resources.

The benefits
Improved engagement between pupils, parents and staff

Our solution enables principals, teachers, parents and pupils to securely access tailored learner information, to provide a clear picture of each pupil's progress and outcomes. Easily monitor learner progress and attainment, highlight groups or individuals that require remedial attention promptly to teaching staff (to allow for increased engagement) and provide bespoke learning for each individual.

Increase parental engagement with regular notifications via SMS or email, direct from our solution. With personal logins to the parent portal, allow parents real-time access to their child's information, giving them peace of mind.

Right information to the right people

Flexible and editable reporting means staff can easily access the information that they need, when they need it. Bespoke widgets and dashboards allow for tailor made views for the range of staff in your school and their different roles. Automatically push regular electronic reports to teaching staff, management boards and other stakeholders using the subscription reporting functionality.

FACT SHEET

Reimagine your MIS with CloudSchool

Safe and secure off site data

Be confident your data is safe and secure offsite with enterprise level security and local support. Our Cloud-based MIS is resilient and monitored 24/7, with regular disaster recovery tests. Hosted within the Amazon Web Services Cloud infrastructure in Dublin, the solution complies with both the DPA and the European Data Directive.

Improve safeguarding at your school by eliminating paper based reporting that could be mislaid or require shredding after use. Introduce password protected onscreen data, only visible to those with granted access.

Cost effective solution

With stretched budgets, streamline your costs and return on investment with hosted software, in line with your Cloud vision. Savings come from cheaper power, licenses, hardware and support. Reduce server counts, maintenance requirements and costly upgrades.

Advanced deliver application updates at suitable off-peak times, so the next time you log in, your updates are complete. With this solution, there's no longer the need to bring in expensive IT consultants for server migrations and upgrades.

Anytime, anywhere access

Allow your staff to work anytime, anywhere with 24-hour access from any internet-enabled device. Available on multiple devices including tablets, smartphones, Macs and PCs, with our Cloud solution users have access to data as and when they want/need it.

Great for field trips, registration can be taken offline or via a 3/4G connection. Staff have access to important student data such as medical or contact information when out of school and any behavioural occurrences can also be recorded as and when they occur.

Make things easier for your staff

Advanced look after your updates and statutory requirements, giving you back your most important resource; your time. Submit your September returns in a timely and accurate manner, with our easy to use solution. With full PPOD integration, you can rest assured that your student data is constantly up to date. Automate other back office tasks to reduce workload and allow your staff to work more efficiently.

Our Cloud solution is also much quicker to use within the browser, in particular for regular tasks such as completing registers, than traditional on-premise software systems. Teachers have barriers removed; enabling them to focus on teaching and driving learning outcomes. Principals and Deputy Principals can focus on analysing data, managing intervention and reviewing impact with a much faster turnaround time; utilising powerful built in reporting and real-time access to data onscreen, rather than costly paper based reports.

Integration and partnerships

Third party suppliers prefer our Cloud-based solution as they can use the latest technologies to integrate with us. Our free to use open API gives a greater choice of third party technologies, allows for easier integration with your other existing IT systems and encourages more 'in school' development. At Advanced, we actively encourage partners to help you get the best out of your investment.
